

# RDAP, by the WEIRDS WG

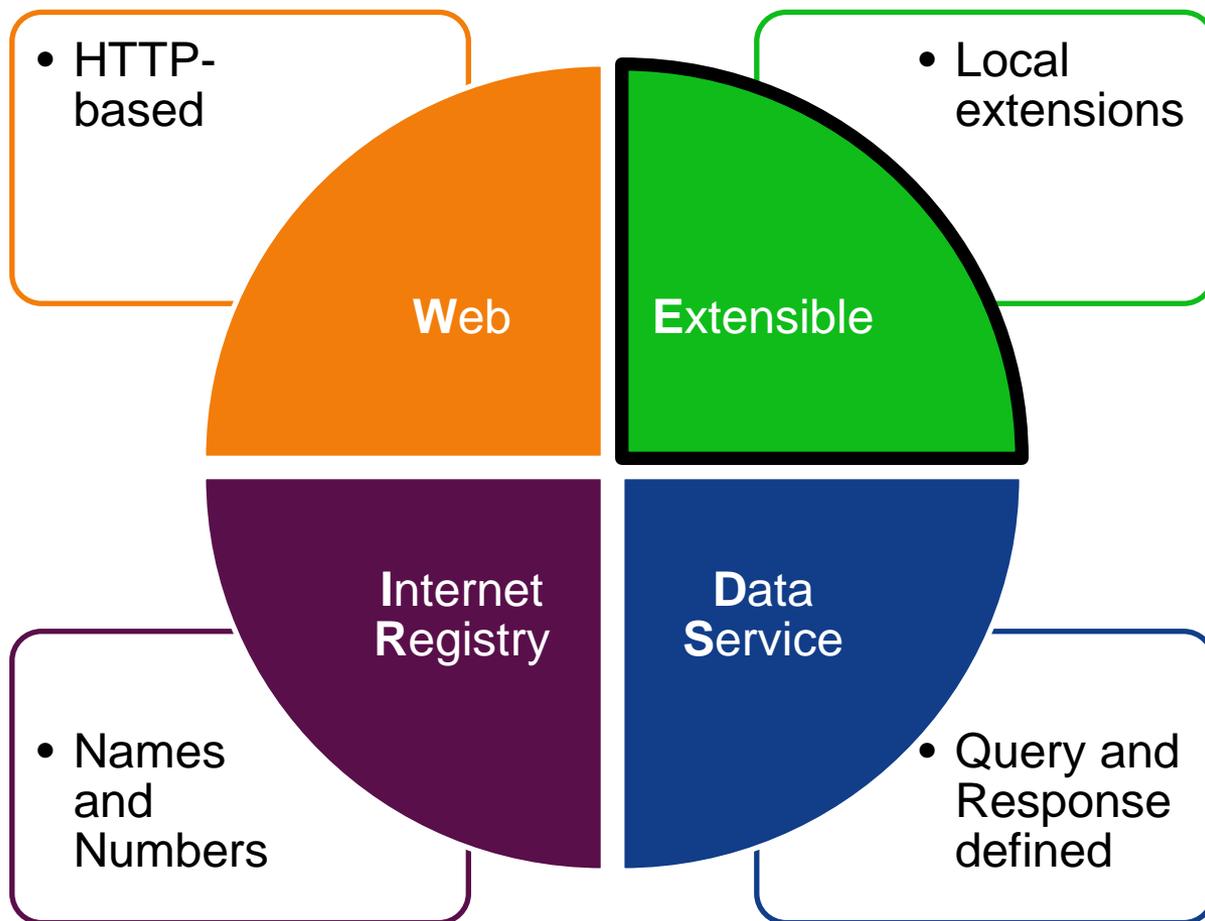

Registry Data Access Protocol

Web Extensible Internet Registry Data Service Working  
Group

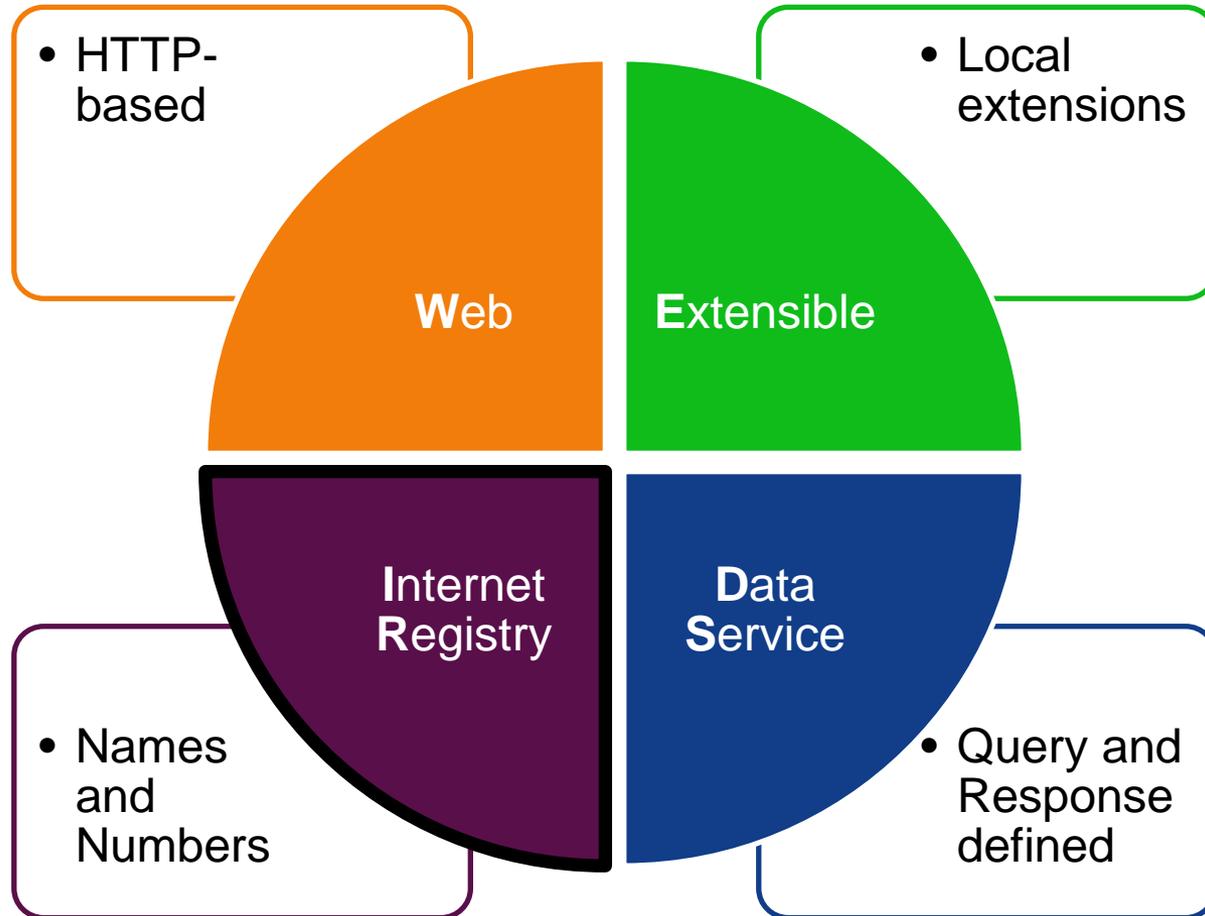

# Introduction

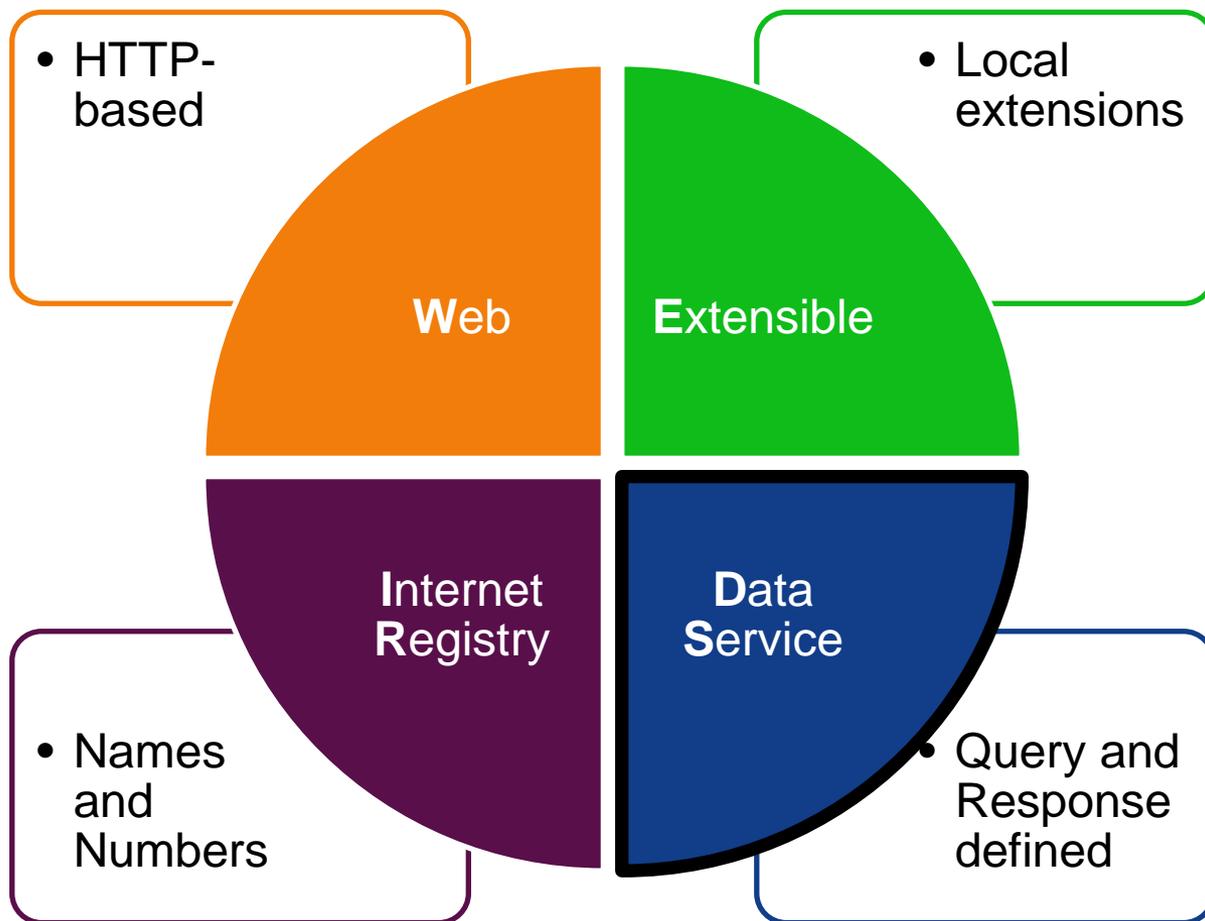

# Introduction

# Introduction

# Introduction

# RDAP vs WHOIS

FEATURE	WHOIS	RDAP
Extensible for registry-specific data	✓	✓
Structured query and response format		✓
International character set support		✓
Authorization and Authentication		✓
Redirection to authoritative sources		✓
Lightweight transactional protocol	✓	✓
Data dictionary for core data		✓
Read-only protocol	✓	✓

# Key Benefits

- Internationalization support (IDNs, UTF-8)
- Standardization of queries and responses
- Authorization and Authentication support
  - Differential service levels for, eg, LEA
- Redirection to authoritative sources
  - <http://rdap.org/> presents single query point for:
    - APNIC, ARIN, Lacnic, CentralNIC, and Verisign
- These are *technical* challenges for WHOIS

# Policy Enablement

- RDAP *enables* policy decisions, but does not make them
  - Which data must be presented in a result?
  - What (class of) user can view data?
  - How frequently may a user ask for data?
  - What languages/scripts should be supported?
  - What search terms are permitted?

# Data Quality

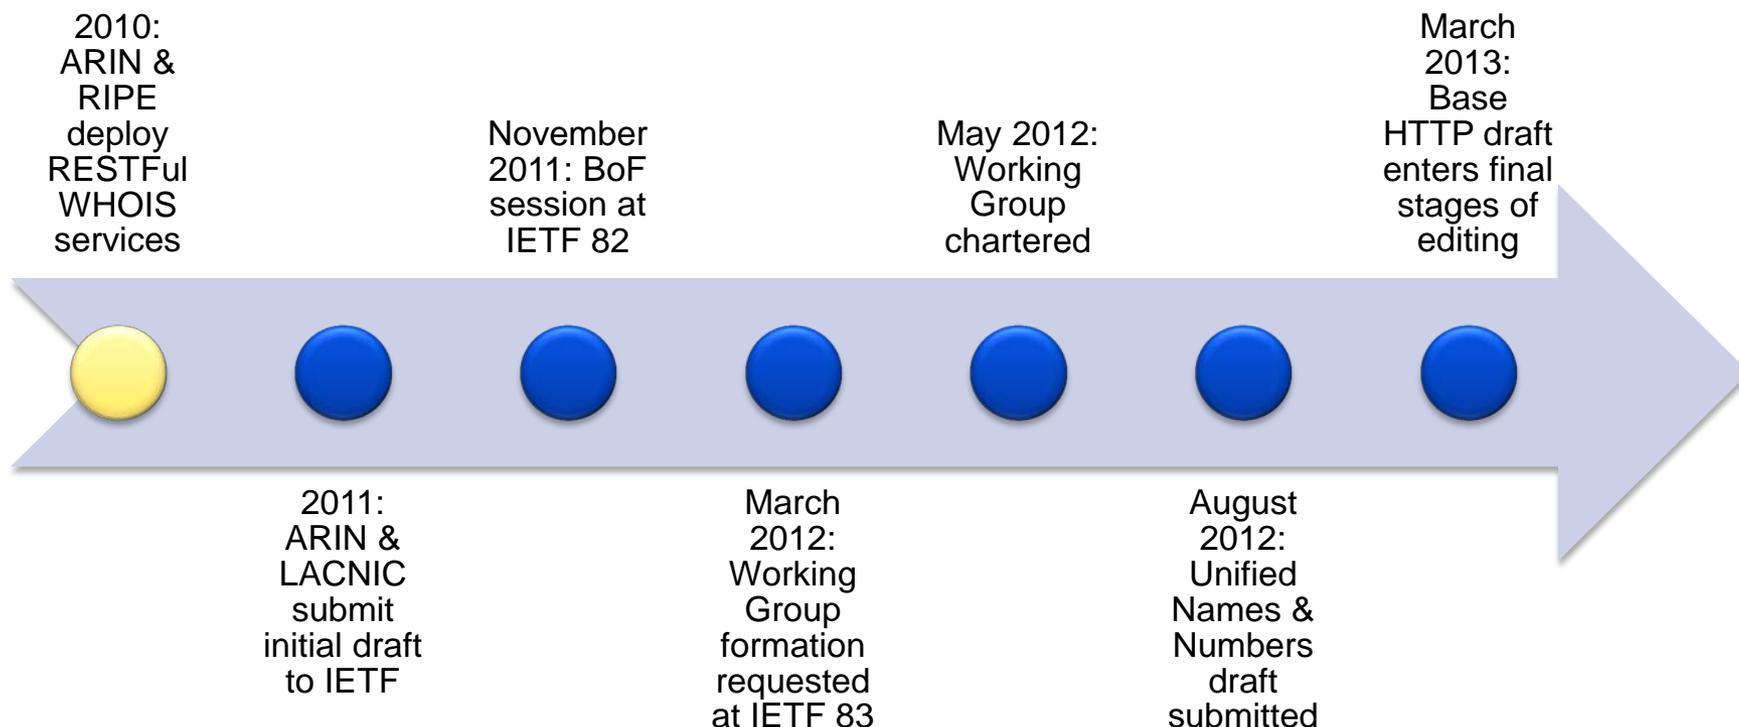

- RDAP does not alter data
  - RDAP defines how to transport and frame data
- Data quality projects are orthogonal to RDAP
  - contact verification processes continue
- RDAP is constrained by existing data
  - Addresses will be structured where possible
  - But unstructured as a fallback!

# RIR Cooperative Work

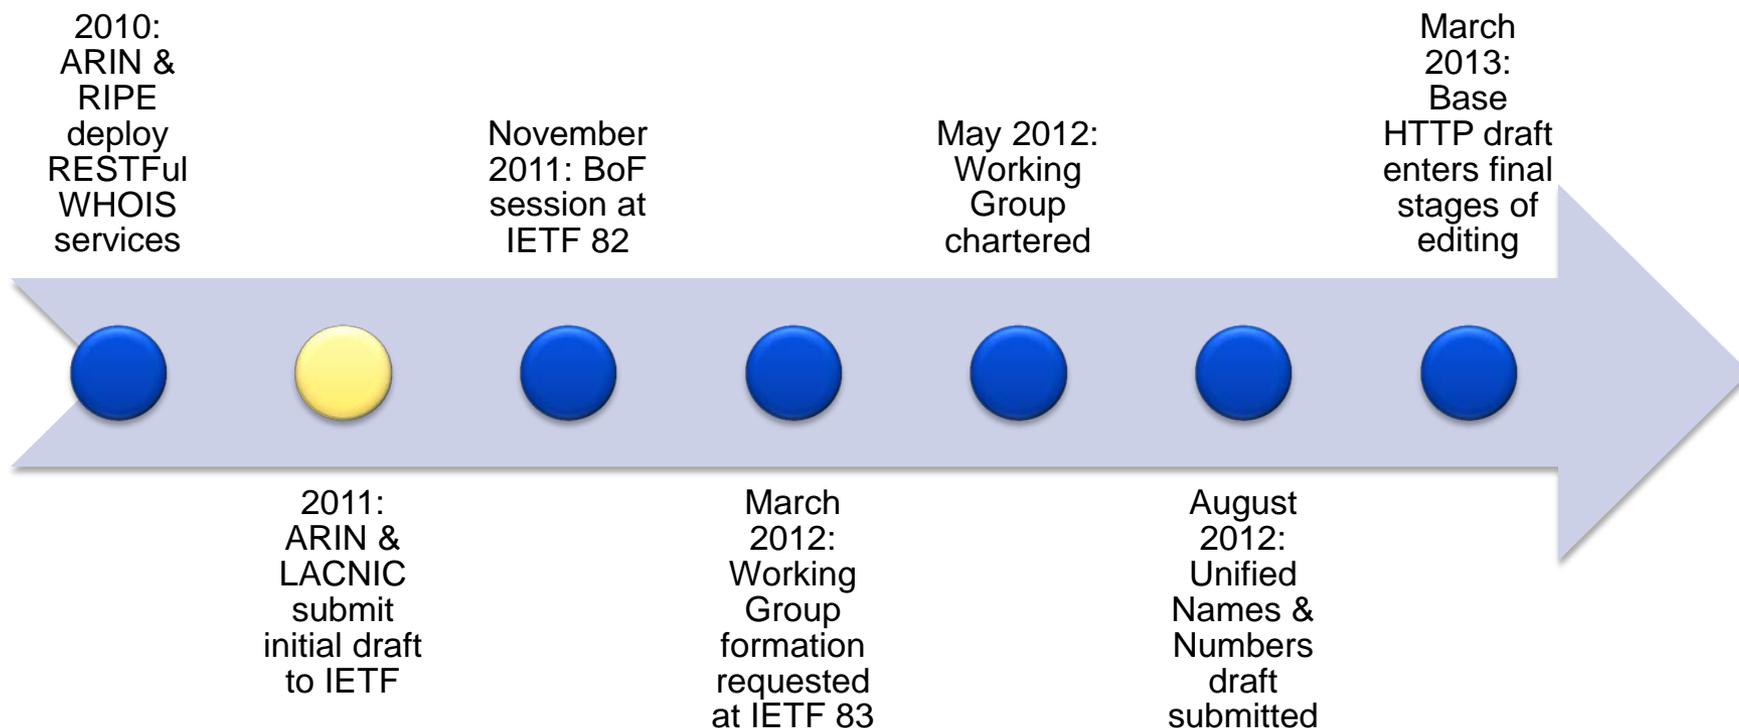

- NRO Engineering Coordination Group
  - Meets face to face at IETFs
  - Teleconferences as needed
  - E-mail list for more frequent communication
- WEIRDS is a collaborative outcome of the ECG
  - Survey of RIR WHOIS systems
  - Common model for data and API
  - Outcome taken to IETF for standardization

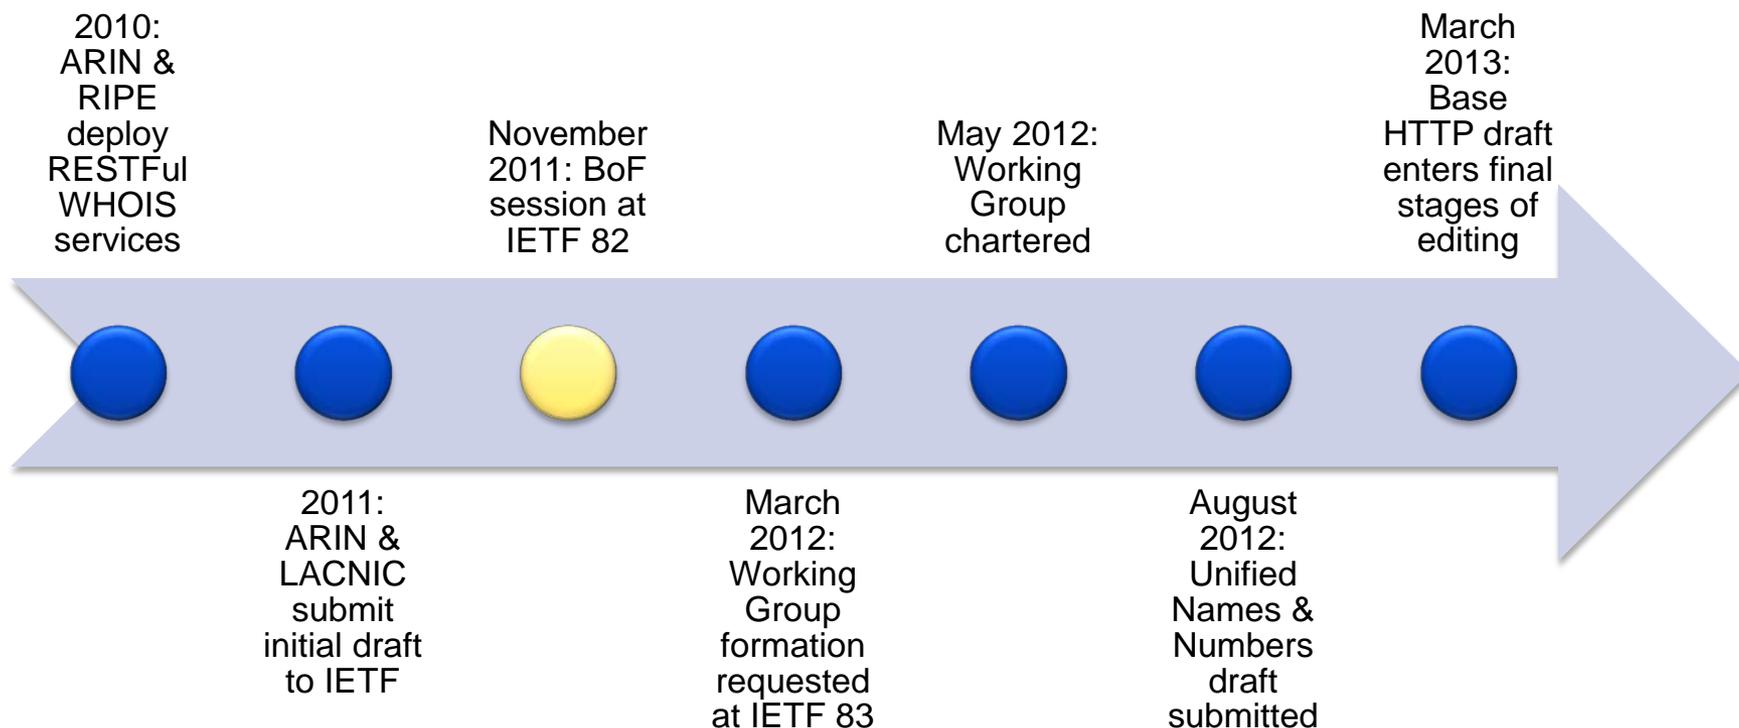

# History

# Open Source Initiatives

- Open Source development, CNNIC+ICANN partnership
  - <http://www.restfulwhois.org/>
  - Target completion: December 2013
- Open Source 43+80 server, lead by RIPE NCC
  - To be made available this year
  - Target completion: August 2013

# Summary

- Key benefits are technical
  - I18n, structure, authentication
- Policy enabling technology, not policy making
- Cooperative work by names and numbers

# Thank you

Paul Wilson
