New gTLD Program Update

http://brussels38.icann.org/node/12533

Monday 21 June 2010 – 15:30 – 17:30

[2010-06-21 15:43:13] Robert_Hoggarth: kurt advises me that the Q&A will take place at the end of the session, but I will collect a queue throughout the session

[2010-06-21 15:53:25] Karla_Valente_2: there will be 1 hour Q&A at the end of this session. Please submit your questions asap.

[2010-06-21 15:57:40] Karla_Valente_2: thank you, Erick

[2010-06-21 16:03:03] Erick_Iriarte: thanks to you.. i sent by email to the comments (was publicated) but nobody answer that was received :)

[2010-06-21 16:03:33] Charles: How the clearing house data will be built please?

[2010-06-21 16:04:01] Charles: compiled from the different Trademarks databases or there is faster way

[2010-06-21 16:04:38] Cory_Schruth4235: Test

[2010-06-21 16:12:34] Karla_Valente_2: Erick: do you mean you sent your comments to the public forum for the Applicant guidebook version 4?

[2010-06-21 16:15:21] Karla_Valente_2: gpmgroup: you question will be asked to kurt at the end. I can answer that, but it is a bit long.

Robert_Hoggarth: Q&A time everyone. Karla will be delighted to read them out for you. Please label any post as QUESTION or COMMENT to make sure we don't miss it. In queue so far, erik iriarte, charles and gpmgroup.

Erick_Iriarte: thanks robert

Charles: thanks

evan_leibovitch: test

Bob_Connelly11414: Hello

gpmgroup: non substantive review leads to problems too

Jim_Fleming: QUESTION Is ICANN aware that industry-wide software/hardware changes will likely render your plans moot? Example: You are focused on DOS and users will be on Windows by the time you finish your studies.

Bob_Connelly11414: Hello

Karla_Valente_2: jim, there was laughter in the room ;-(

ALL: if you have more questions, statements, please let me know asap.... he line is short :-(

Bret_Fausett: I strongly support Mr. Van Couvering's comment.

DKI: Hi Karla, My name is David Cowen, and my question is: It is likely that further delays will occur in the new gTLD process. Why are IDN gTLD's disallowed to continue and finalize regardless of the ASCII gTLD process, at least in the countries where idn.idn ccTLD's are live, the way it is now is clearly an unfair advantage to the community. Thank you.

John_McCormac: Question: Is there any sunset process to deal with redelegation of new gTLDs that fail commercially?

Patrick_Jones: John, there is a section in the Guidebook on registry transition/termination

John_McCormac: thanks Patrick - the performance of some of the present gTLDs brought the question to mind.
Jim Fleming: KV: Good or bad as it may be the software/hardware changes coming to DNS and IPv* are in progress & can not be stopped. Internet@TV is now being installed in consumer's homes. That may be the "First Internet" a young person sees. People's .KIDS may not understand the ICANN Community or Process.

Patrick Jones: John - see Module 5 of the Guidebook, there is an explanatory memo

Karla Valente_2: Jim: I hear you!

Karla Valente_2: David: got your question

John McCormac: Karla, Patrick's answer is fine.

Karla Valente_2: ok, let me know

Bret Fausett: No, you don't get a preference for a generic domain name because you were the first to put up a website, sponsor a meeting, or file a trademark application.

lightIRC_6589 is now known as George Kirikos.

George Kirikos: Hi folks. :)

Hi George

George Kirikos3069: Hello.

lightIRC_2029 joined the chat room.

George Kirikos3069: Here's a question for ICANN: Has anyone read the document by Tim Berners-Lee, titled "New TLDs considered harmful" http://www.w3.org/DesignIssues/TLD

Ryan: @gpmgroup: I think this was the referenced article: http://www.circleid.com/posts/20090819_new_gtlds_let_the_gaming_begin_part_1_tld_front_running/
[2010-06-21 17::24:47] Bret_Fausett: For the .MUSIC team, they should know that not everyone who has been following this process and participating in the ICANN process is public. You get no priority because you decided to go public. Public v. stealth mode has never been an evaluation point.

[2010-06-21 17::24:52] hta: Kirikos, Tim was specifically talking about .xxx and .mobi.

[2010-06-21 17::25:33] George_Kirikos3069: Wrong -- read the entire document, including the title bar.

[2010-06-21 17::26:35] John_McCormac: There is a distinct danger that many new gTLDs will turn into zTLDs - zombie TLDs.

[2010-06-21 17::26:40] Karla_Valente_2: all: we have only 10 minutes left. I believe I got all your questions/comments on record. Thank you all for your participation. Please go to the comment forum to share your thoughts and join the tuesday and wednesday sessions on new gTLDs.

[2010-06-21 17::26:49] George_Kirikos3069: Did you get mine, Karla?

[2010-06-21 17::28:35] Jim_Fleming: KV: Thank you for your help and understanding. In my opinion, the hill gets very steep from here and the rocks, cliffs and dragons on the other side are worse.

[2010-06-21 17::28:43] George_Kirikos3069: Fortunately, remote participants can't smell the odor in Brussels. :)

[2010-06-21 17::28:44] hta: george, xxx is in fact referenced ONLY in the title / intro. He gives no specifics about that. Most of his 2004 rant was about the idea of segregating mobile devices on the Web.

[2010-06-21 17::28:48] gpmgroup: @ryan thanks

[2010-06-21 17::29:32] Bob_Connelly11414: Who is in front of the camera

[2010-06-21 17::30:34] John_McCormac: were you expecting anything different George?

[2010-06-21 17::30:40] Bob_Connelly11414: What's next and when?
Robert_Hoggarth: bob .... Proposals for Improvements to the RAA Monday, 21 June 2010 - 17:30 - 19:00

gpmgroup: Would it be worth making links given in the chatroom clickable? So there was no need to copy and paste

John_McCormac: it would be handy but there could be security issues

wseltzer: If you use IRC with a reasonable client, you can click away

John_McCormac: what is worrying about the whole new gTLD process is that most of the new gTLDs will turn into zombie TLDs if the last ten years is any guide

gpmgroup: TThanks Wendy thats what I thought - using Adobe perhaps there is a setting

Bob_Connelly11414: Is this the right node and room for the RAA discussions?

gpmgroup: @john I think pre existing real world communities may be the key like .cat

John_McCormac: @gpmgroup yep. They have good pre-existing markets that are very well defined. The city TLDs are the most likely to do well even with ccTLD competition.

gpmgroup: problem iwth cities though is like .vegas where there is massive lobbying of local government bodies promising riches

John_McCormac: most of the new gTLDs will be heavily dependent on brand protection and there's a trend in some of the newer TLDs that brand protection is not a big concern

John_McCormac: the number of doms regged in com/net/org/biz/info/mobi/asia/tel was only 28762 (June 2010)

wseltzer: QUESTION: why are there no end-user perspectives represented on the panel?
