

# IRTP Part B Implementation

*Brian Peck*

**COSTA RICA**

11-16 March 2012

# Revisions to IRTP under Part B

- 1) **Registrars must provide a Transfer Emergency Action Contact (“TEAC”)**
  - Messages sent via the TEAC communication channel must generate a non-automated response by a human representative of the Gaining Registrar.
  - The person or team responding must be capable and authorized to investigate and address urgent transfer issues.
  - Responses are required within 4 hours of the initial request, although final resolution of the incident may take longer.

# Revisions to IRTP under Part B

## 2) Revisions to IRTP Provisions

- Modification requiring that the Registrar of Record/Losing Registrar must notify the Registered Name Holder/Registrant of the transfer out request.
- Modification to the #6 Reason for Denial which requires that the objection must be provided with the express and informed consent of the authorized Transfer Contact on an opt-in basis.
- The deletion of the #7 Reason for Denial - when a domain name was already in lock status.

# Status of Implementation

- Revisions to existing IRTP Provisions have been drafted and cleared by Legal – recently posted on website

<http://www.icann.org/en/resources/registrars/transfers/policy-01jun12.htm>

- Formal notice to Registrars about the changes to the IRTP and new TEAC requirement sent on 29 February
- Effective date for new revisions and compliance with new obligations is 1 June 2012

# Status of TEAC Implementation

- A new contact field has been set up in RADAR for each registrar to enter its contact details for the Transfer Emergency Action Contact.
- ICANN has initially populated the TEAC fields with information presently on file for the registrar's Transfer Contact (Primary Contact if Transfer Contact was not present).

# Status of TEAC Implementation

- Once logged into RADAR registrars will have access to the contact information for all other registrars under the “View All Registrars” button on the left side of the screen.
- This feature is live now, however the use of the TEAC and the response time requirement will not go into effect until 1 June 2012.

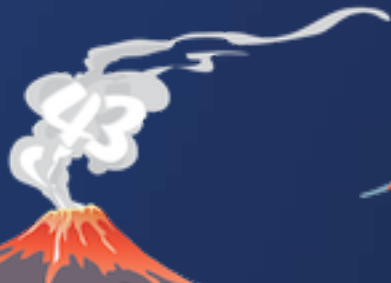

# Status of TEAC Implementation

- The communication function in RADAR will be live on the effective date.
- Losing registrar will be able to use the communication tool to send an Emergency Action request to the gaining registrar's TEAC.
- This message will be time and date stamped to facilitate compliance with the 4-hour response requirement.
- A record of this communication along with the date and time sent will be maintained by ICANN and available for future access.

Thank You
