

# New gTLD Program Introduction

Presenters: Carole Cornell  
and Karla Valente

*ICANN Seoul Meeting  
October 2009*

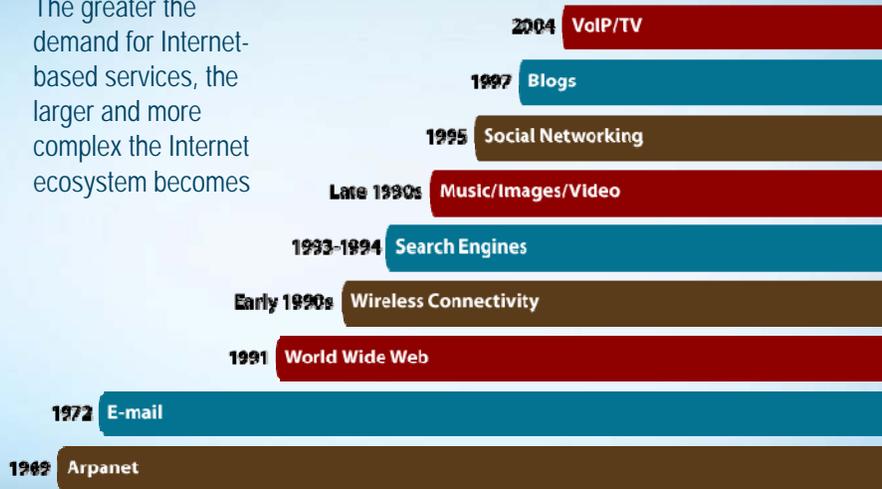

## Agenda

- About ICANN
- Brief background of new gTLDs
- What to expect and why should you care?
- Program current status
- Overarching issues overview
- Next steps

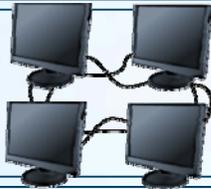

## Increased demand for Internet services

The greater the demand for Internet-based services, the larger and more complex the Internet ecosystem becomes

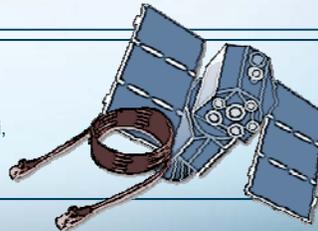

## Internet's three operating layers

**Content and applications standards (HTML, XML, Java)** – Promotes creativity and innovation in applications leading to email, World Wide Web, ebanking, wiki, Skype, and much more

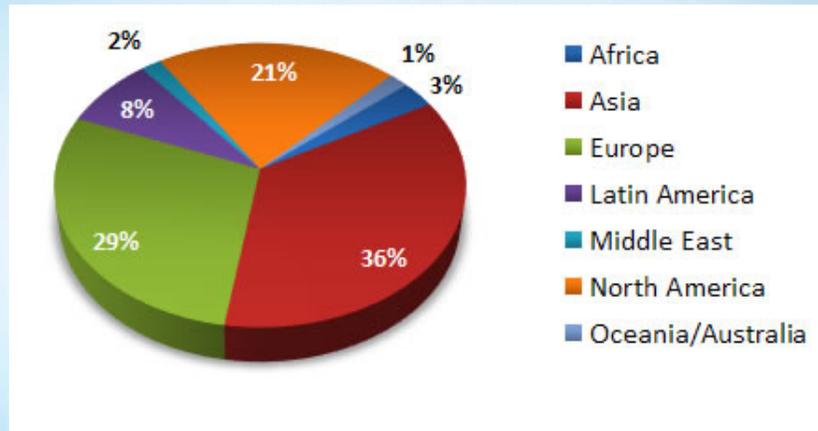

**Internet protocols and standards (TCP/IP, DNS, SSL)** – TCP/IP, controls traffic flow by dividing email and web data into packages before they are transmitted on the Internet

**Telecommunications infrastructure** – Physical network made up of underwater cables, telephone lines, fiber optics, satellites, microwaves, wi-fi, and so on Facilitates transfer of electronic data over the Internet

## World Internet users

© 2007, www.internetworldstats.com

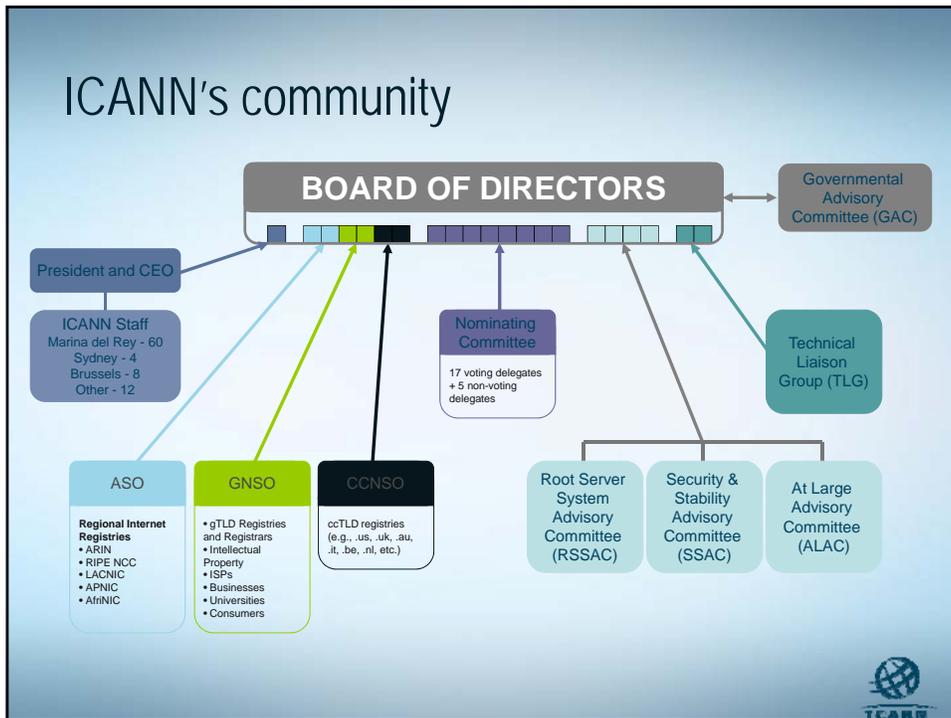

## ICANN mission statement

- To coordinate, overall, the global Internet's system of unique identifiers, and to ensure stable and secure operation of the Internet's unique identifier systems. In particular, ICANN coordinates:
  1. Allocation and assignment of the three sets of unique identifiers for the Internet:
    - Domain names (forming a system called the DNS)
    - Internet protocol (IP) addresses and autonomous system (AS) numbers
    - Protocol port and parameter numbers
  2. Operation and evolution of the DNS root name server system
  3. Policy development reasonably and appropriately related to these technical functions

6

## ICANN's community

## ICANN's mission and New gTLDs

- A core objective in founding ICANN; a requirement in each of ICANN's U.S. government agreements (1998 – present):  
*“Define and implement a predictable strategy for selecting new TLDs”*
- Fostering choice and competition in provision of domain registration services
- ICANN's founding documents (in 1998):  
*“The new corporation ultimately should ... 3) oversee policy for determining the circumstances under which new TLDs are added to the root system”*

## Brief gTLD historical background

- There are presently 21 gTLDs in the root zone
- There were eight that predate ICANN:  
**.com .edu .gov .int .mil .net .org .arpa**
- Seven were added in a round starting in 2000:  
**.aero .biz .coop .info .museum .name .pro**
- Six were added in a round starting in 2004:  
**.asia .cat .jobs .mobi .tel .travel (soon to be added: .post)**
- Experience in past rounds has been factored into current new gTLD planning

9

## What can we potentially expect?

- Internationalized Domain Names (IDN)
- Increase in creativity, innovation and consumer choice
- Increase in competition in the domain name space
- gTLDs tailored to address community needs
- Geographic gTLDs
- New ways of branding and establishing corporate identity on the Internet

10

## Why should you care?

- New ways end users find information on-line
- More choices as registrant
- Opportunity for investment and new businesses
- A more globally and culturally inclusive internet with IDNs
- Systems and applications will need to be updated to accept new TLDs
- Potential impact on your brand or trademark
- Potential impact on your cultural community, organization and industry sector
- Potential impact on your geographic name

11

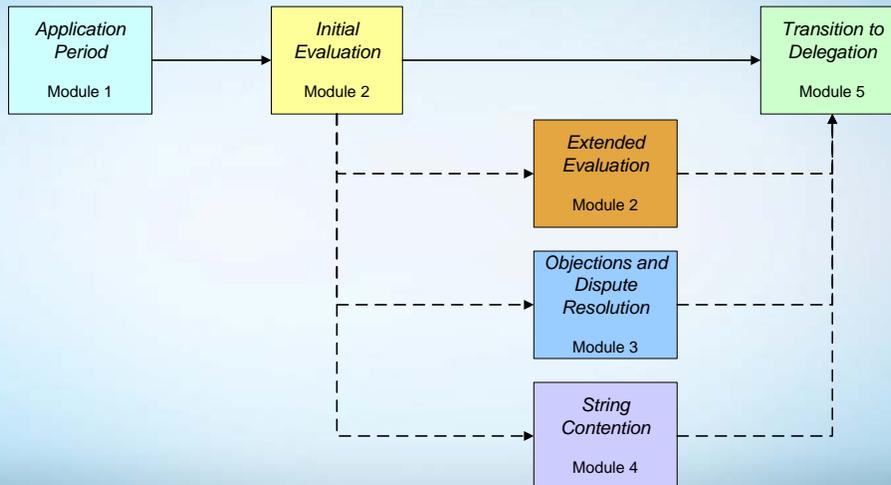

## What happened so far?

- Policy development – Dec 2005 to Sep 2007
- ICANN Board Policy approval – Jun 2008
- Publication of Draft Applicant Guidebooks for public comments
  - ◆ November 2008 (version 1)
  - ◆ March 2009 (version 2)
  - ◆ May 31 (Excerpts)
- Publication of several reports and explanatory memos
- Focused work on overarching issues resolution with help of experts and ICANN community

12

## New gTLD Evaluation Process

13

## New gTLDs and overarching Issues

- Four key concerns were identified based on public comments in November, 2008; regarding:
  - ♦ Trademark protection
  - ♦ Possible amplification of malicious conduct on the Internet
  - ♦ Questions regarding new gTLD demand (including issues of cost)
  - ♦ Security and stability impacts of an expanded number of gTLDs

14

## General approach to address overarching issues

- ICANN has approached each issue individually, but recognizing that all must be addressed before launching the new gTLD process
- Identified experts in each field to provide solutions/models for public discussion
- Enables open and extensive public comments periods on each of these issues
- All this work will inform the next version of the Draft Applicant Guidebook

15

## Trademark protection - issues raised

- Cost and administrative burden to rights owners of many new gTLDs
- Potential increase in cybersquatting, consumer confusion
- Scalability of existing dispute processes (UDRP) to a larger name space
- Preventing bad actor registry operators
- Others

16

## Malicious conduct - issues raised

- Will instances of malicious conduct multiply with the introduction of new gTLDs?
- What are the manner / modalities of malicious conduct that might arise?
- How can instances of malicious conduct be mitigated (in volume and effect)
  - ◆ Through the process of introducing new TLDs
  - ◆ Through contract or other restrictions

17

## Root scaling - issues raised

- What are the possible combined effects on root zone performance of the (near) coincident introduction of:
  - ◆ IPv6
  - ◆ DNSSEC
  - ◆ IDNs
  - ◆ New gTLDs
- Are there any impacts on the new gTLD process?

18

## Domain name market - issues raised

- Some economic concerns focused on growth in expense:
  - ♦ Trademark infringements (costs for defensive second-level registrations, protection of trademarks at top-level)
  - ♦ Potential growth in malicious conduct
  - ♦ Potential for user confusion
- Should there be price caps for registration services?
- What are the effects of the switching costs involved in moving from one TLD to another?
- What is the effect of the market structure and pricing on new TLD entrants?

19

## Recent Publications

- Draft Applicant Guidebook, version 3 + other documents:
  - ♦ Update on Cost Considerations
  - ♦ Malicious Conduct
  - ♦ Voluntary Security Designation program
  - ♦ Summary changes Registry draft agreement
  - ♦ Root scaling study
  - ♦ Draft Global Communications Plan
- Summary analysis on public comments
  - ♦ IRT Final report
  - ♦ Consultations - Sydney, NYC & London
  - ♦ Excerpts Comments
  - ♦ Root scaling TOR
- Two Trademark Protection mechanisms proposals
  - ♦ URS
  - ♦ TM Clearing House

## What's next?

- Staff continues to balance the desire to move ahead with the launch plans while addressing the Community raised concerns
- Actively working with experts and seeking community input on Overarching Issues through participation in Global consultation events + dedicated Wiki
- Working on next version of Applicant Guidebook
- Operational readiness – retain evaluation panels

21

## New gTLD Seoul Sessions

- Sunday 09:30 – 10:30 “Introduction to new gTLDs”
- Monday 10:30 – 12:00 “Program update and sessions for the week”
- Monday 15:00 – 17:00 “Registry/Registrar Separation”
- Monday 17:00 – 19:00 “Mitigating Malicious conduct”
- Wednesday 12:30 – 14:00 “Trademark protection”
- Wednesday 12:30 – 14:00 “Root scaling study results”

22

## Upcoming events

- Latin America
  - ♦ Sao Paulo – Nov 24
  - ♦ Buenos Aires – Nov 27
- Africa and webinars under development

23
