

# CCWG-Accountability WS1 Proposals

- From our ccTLD perspective, having consulted with our local stakeholders, Afnic **endorses** the approval
- Delivers the improvements of ICANN's accountability that must be in place before the IANA Stewardship Transition.
  - We have requested SLEs, CSC, complaint escalation for many years
  - The proposal addresses our recurrent concerns about :
    - Lack of due process
    - Mission creep
- Secures further accountability enhancements for the future, starting with the upcoming Work Stream 2 efforts.
  - ICANN's accountability (or lack thereof) reflects upon us when engaging our stakeholders, and we want to maintain that momentum
