KSK Sentinel

draft-ietf-dnsop-kskroll-sentinel

Geoff Huston
Joao Silva Damas
Warren Kumari

What's the problem?

- We need want to roll the DNSSEC trust-anchor (KSK)
- Users with a validating resolver that doesn't have the new KSK break; everything looks BOGUS
- We have no way of measuring deployment, and so don't know who (and how many!) will break

Wait! RFC8145?!

Signaling Trust Anchor Knowledge in DNS Security Extensions (DNSSEC)

Abstract

The DNS Security Extensions (DNSSEC) were developed to provide origin authentication and integrity protection for DNS data by using digital signatures. These digital signatures can be verified by building a chain of trust starting from a trust anchor and proceeding down to a

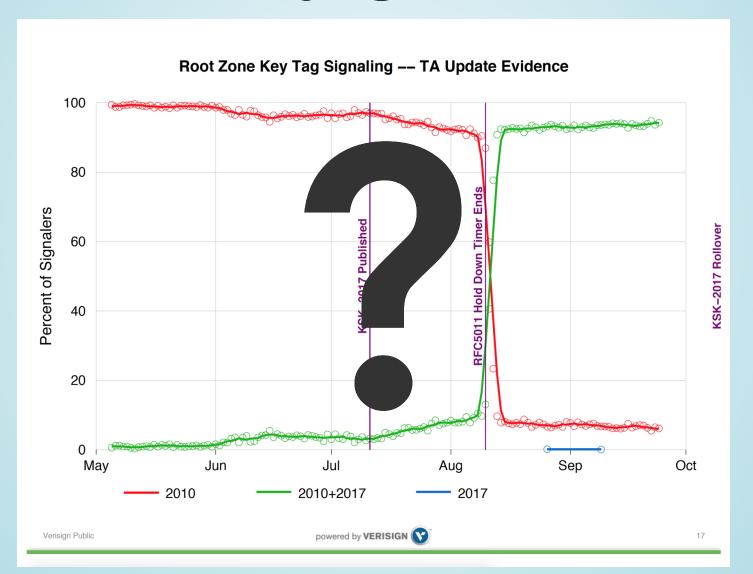

- Sadly, no.
- This provides reporting from resolvers

I have a validating resolver in my basement... it doesn't have the new key :-(

but no-one is using it :-)

If a resolver falls in the forest, but no-one is using it, does it matter?!

Pretty graphs!

<u>Sentinel</u>

- 1. Requires a (simple) resolver update
- 2. Allows anyone to set up a measurement service
- 3. Exposes the result to the users

The change

Just before sending the **response** (after resolution, validation):

- kskroll-sentinel-is-ta-[key].something?
 - If have the key, reply normally, else SERVFAIL
- kskroll-sentinel-not-ta-[key].something?
 - If do NOT have the key, reply normally, else SERVFAIL

Example

- I'm a validating resolver. I support sentinel.
- I have the new KSK (20326)
- I get a query for invalid.example.com
 - It fails DNSSEC validation SERVFAIL
- I get a query for

kskroll-sentinel-is-ta-20326.example.com

- I resolve it and get 192.0.2.23
 - I have (and am using) KeyID 20326
 - answer with 192.0.2.23
- I get a query for

kskroll-sentinel-not-ta-20326.exam

- I do have (and am using) KeyID 20326
 - send SERVFAIL

Yawn. So what?!

Do you see:

- Fish? Not validating, key-roll doesn't affect you.
- Kitten and Puppy? Legacy, we cannot tell.
- Kitten? You have the new key, you'll be fine.
- Puppy? DANGER! You only have the old key.

Srsly? Kittens?!

Sadly, no...

       <script type="text/javascript">
19
        var invalid=true, is_ta=true, not_ta=true, result="Testing failed...";
20
21
        $('#img_invalid').error(function(){invalid=false});
        $('#img is ta').error(function(){is ta=false});
23
        $('#img_not_ta').error(function(){not_ta=false});
24
        window.addEventListener('load', function(){
26
          switch (true) {
27
          case invalid===true:
28
            result='No DNSSEC validation, you will be fine...'; break;
          case (is_ta===true && not_ta===true):
             result='Legacy resolver, cannot determine your fate!'; break;
           case (is_ta===true):
             result='WARNING!: You do not have the new KSK.'; break;
          case (not ta===true):
            result='Congratulations, you have the new key. You will be fine.'; break;
          $('#sentinel').text(result);
        });
       </script>
    </body>
    </html>
```

...but kittens!!!

Sorry, still no...:-(

Demo: http://www.ksk-test.net:

Sentinel KSK Test

tl;dr: You are using a legacy resolver, we cannot determine your fate!

This page uses the methods described in <u>A Sentinel for Detecting Trusted Keys in DNSSEC</u> to determine if the resolvers that you are using will survive the upcoming KSK roll. You should really read the document, but the 50'000ft view is that it attempts to load resources from 3 names:

- "http://invalid.ksk-test.net/invalid.gif"
- "http://kskroll-sentinel-is-ta-20236.ksk-test.net/is-ta.gif"
- "http://kskroll-sentinel-not-ta-20236.ksk-test.net/not-ta.gif"

It then uses some simple logic to tell what your fate will be after the KSK roll:

- 1. If you are not using a validating resolver, you will be able to load the invalid record.
- If you are using a validating resolver which does not understand this new mechanism you will be able to load both of the sentinel records: kskroll-sentinel-is-ta-20236 and kskroll-sentinel-not-ta-20236.
- 3. If you are using a resolver that supports this mechanism you will only be able to load one of the two sentinel records which one tells you how you will fare in the rollover.

When running the above test, you:

- · were NOT able to fetch the "invalid" record
- · were able to fetch the "kskroll-sentinel-is-ta-20236" record
- were able to fetch the "kskroll-sentinel-not-ta-20236" record

Questions?
