

Draft DNSSEC automation

- <https://datatracker.ietf.org/doc/draft-ietf-dnsop-dnssec-automation/>
- Describes algorithms on how to organize, configure and run a multi-signer setup
- We got two (early) security reviews
- All nits are fixed in version 3
- Additional explanation or wording added
- Last open point: Explaining setups with different algorithms (don't do that, does not work reliably)
