

DNSXplore

A DNSSEC Archival & Diagnostic Platform

جامعة عجمان
AJMAN UNIVERSITY

DNSXplore Team

We are working to develop the **DNSXPLORE platform** for the Internet community that will help in DNSSEC archival, verification requirements of end users, especially academia, cyber security experts and DNSSEC implementers (telcos)

Dr. Naveed Bin Rais

Director DNSXplore Project
Professor Ajman University, UAE

Hafiz Farooq

NomCom 2026 Delegate
RSSAC Caucus, GNSO CBUC (Large)

Team Members

Jehandad Khan (Project Architect)

Shahzaib Jutt (BE Developer)

Ahmad Waqar (FE Developer)

Sana Abouelnour (Junior Developer)

What's DNSXplore Project

DNSXplore is an **ICANN funded project** to develop a DNSSEC Archiving and Diagnostic Platform. Currently there are no comprehensive platforms in the world for the Internet community (especially gTLD and ccTLD community), which provides historical DNSSEC data to better understand the implementation flaws, security weaknesses and design loopholes

DNSXplore

Funded by ICANN Grant Program

DNSXplore Project

Project Features

Funded by ICANN Grant Program 2024

Analyze DNSSEC Records for 600Million+ Internet Domains

DNSSEC Crawl rate: 10Million Domains / Day

DNSSEC Data Retention: 1 Year

Free DNSSEC Data Access to Internet Community

DNSSEC Research Lab

Funded by ICANN Grant Program 2024

Apache **Kafka** will be used for streaming the Passive DNNSEC data collected through crawlers

Grafana will be used for the real time dashboarding and visualizations

BIND9 service will be used for DNSSEC validation

MongoDB will store all the DNSSEC raw data objects for longer duration

GraphQL will be used for the API interface for the Data Warehousing
