

DNS at NLnet Labs

Jaap Akkerhuis

Outline

- Mission
- History
- Our Methodology
- For TLDs relevant Tools
- Support etc
- Current plans
- The open Source dilemma

Mission NLnet Labs

To provide globally recognized innovations and expertise for those technologies that turn a network of networks into an Open Internet for All

NLnet Labs History

- Founded by NLnet Foundation
- Not for profit organisation (ANBI)
- Live by Donations
- Want stable long term base

Methodology

- UNIX Background
- Tools based solutions
 - “Do one job at a time and do that well”
 - Don’t make policy decisions for the operator
- Employable reference implementations
 - Special wishes on request
- Industry quality code
- There are things we don’t do

Relevant Tools

- NSD — Authoritative Name Server
- LDNS — Library to manipulate DNS data
 - Tools based on LDNS — Drill, Dns-key-gen etc.
- OpenDNSSEC — To maintain dnssec keys and interact with HSM etc

NSD History

1. Precompile all
 - very stable zones servers — root servers
2. DNSSEC added
 - and some support for “unstable” zones — TLDs
3. More support for dynamic zones — ISPs
4. Lot’s of zones, more operator friendly
 - Compilation as an option

LDNS

- Library to manipulate DNS data
- Some tools using the library
- Inspired by Perl NET::DNS
- C for Speed
- Now with Python and Perl(!) bindings

Other Tools/Projects

- Unbound
 - Recursive, caching, and validating name server
- Engrid
 - Routing policy engine
- Get-dns API (with Partners)
 - More detailed dns info to applications
- Perl Net::DNS

Random Ideas

- Masterdont — Provisioning engine
- Credns — pre publication checking

Support

- Third parties are doing and user support, consulting, courses, packaging etc.
- Direct flexible support via OpenNetlabs
 - Speak to Han Brouwers
- Specialised services

Future (NSD) Plans

- Outgoing XFR
- Per zone statistics (optional)
- Better interface with OpenDNSSEC
- Lots of TCP streams

Open Source Dilemma

- Free as in Free Beer
- Beer Barrels are not infinite
- Standards evolve
 - Tracking standards does have it's costs
 - Requires long term commitment (and funding)
