

WHOIS Registrant Identification Study

Steven Pedlow, Statistician
Michael Jugovich, IT Data Leader
Edward Mulrow, Project Director

ICANN Meeting 45
Toronto, Canada
October 17, 2012

at the UNIVERSITY *of* CHICAGO

Outline of Presentation

- Goals of Project
- Coding
 - A. WHOIS variables
 - B. Domain User variables
 - C. Domain Content variables
- Preliminary Draft Results of Analysis
 - 1. Domain User Type Differences
 - 2. Registrant Type Differences
 - 3. Potential Commercial Activity: Compare Yes and No

Goals of Project

- Exploratory examination of WHOIS data for a representative sample of top five ICANN gTLDs
- Intent: Understanding Domain Users and Registrants
 - Types of Entities Using these Services
 - Kinds of Activities for these Domains
- Three Focus Questions:
 1. Domain Users: Natural Persons and Legal Persons
 2. Registrants: Privacy/Proxy, Natural and Legal Persons
 3. Potential Commercial Activity: compare Yes and No

Coding

- For each sampled domain (1,600)
 - We analyzed available internet content
 - Classified the types of entities using the domain
 - Classified various activities associated with the domain
- Three broad classes of variables
 - A. WHOIS variables
 - Apparent Registrant Type
 - B. Domain User variables
 - Apparent Domain User Type
 - Apparent Business Structure

Apparent Registrant Type

- Registrant appears to be a Legal Person
- Registrant appears to be a Natural Person
- Registrant appears to be a Privacy/Proxy Service
- Unclassified

Apparent Domain User Type

Apparent Business Structure

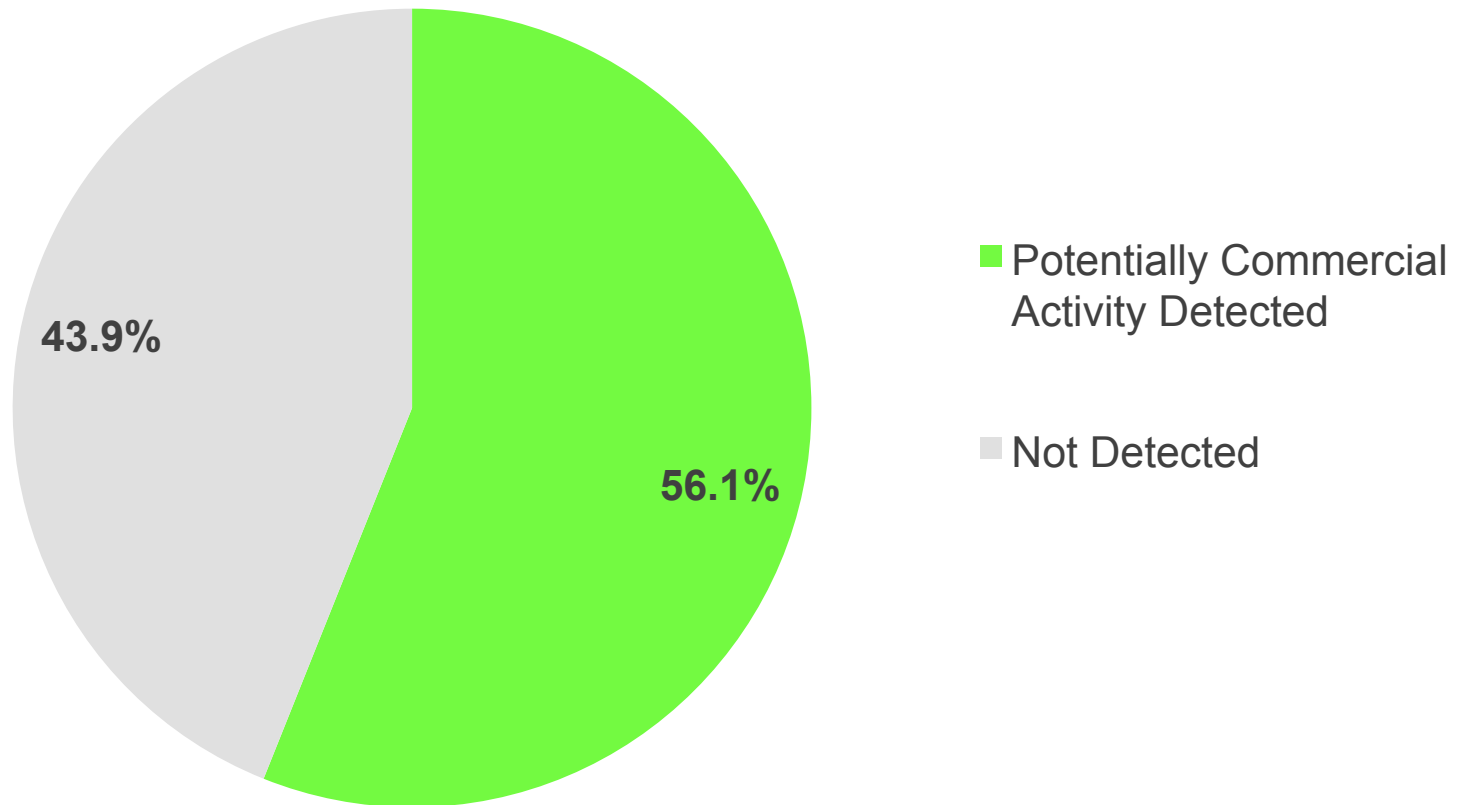

Coding (continued)

C. Domain Content variables

- Potentially Commercial Activity
 - YES if any of the following was detected:
 - E-commerce
 - Membership (Online Content)
 - Membership (Offline Content)
 - Promotional Content (Offline)
 - Promotional Content (Online)
 - Third Party Banner Ads
 - Host Banner Ads
 - Pay-Per-Click Ads
 - Host Pay-Per-Click Ads

Potentially Commercial Activity

Preliminary Draft Results of Analysis

1. How are Domain Users Different (Legal/Natural)?

Apparent Business Structure for Domain Users Who Are Apparently Legal Persons

Apparent Business Structure for Domain Users Who Are Apparently Natural Persons

1. How are Domain Users Different (Legal/Natural)?

Potentially Commercial Activity for Domain Users Who Are Apparently Legal Persons

Potentially Commercial Activity for Domain Users Who Are Apparently Natural Persons

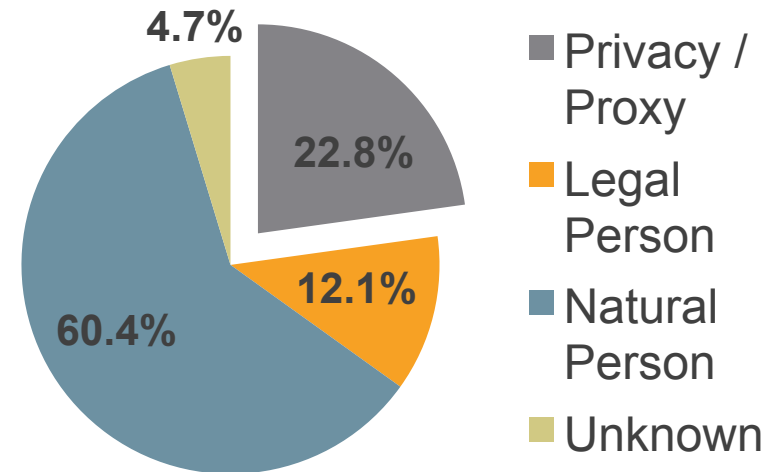

1. How are Domain Users Different (Legal/Natural)?

Apparent Registrant Type for Domain Users Who Are Apparently Legal Persons

Apparent Registrant Type for Domain Users Who Are Apparently Natural Persons

Difference in P/P not statistically significant ($p=.07$)

1. How are Domain Users Different (Legal/Natural)?

Other Statistically Significant differences in Facets of Potentially Commercial Activity

2. Registrant Differences (Legal/Natural/Privacy-Proxy)?

Potentially
Commercial
Activity

P/P significantly different from Natural, $p=.01$
Neither significantly different from Legal

Privacy/Proxy Registrants

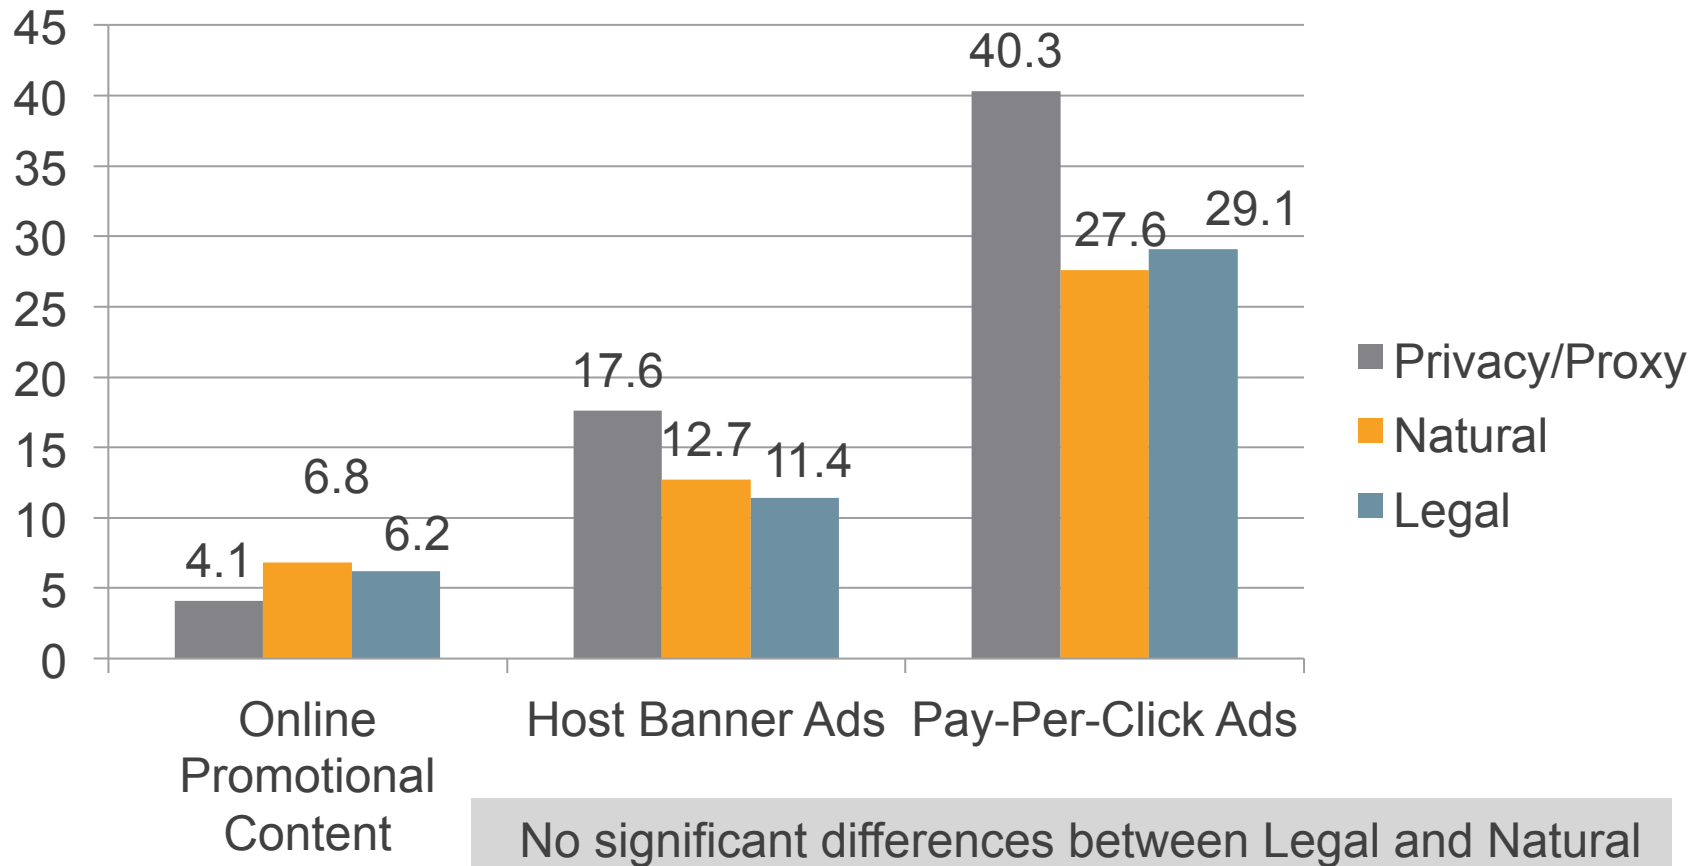

Legal Person Registrants

Natural Person Registrants

2. Registrant Differences (Legal/Natural/Privacy-Proxy)?

Other Statistically Significant differences in Facets of Potentially Commercial Activity

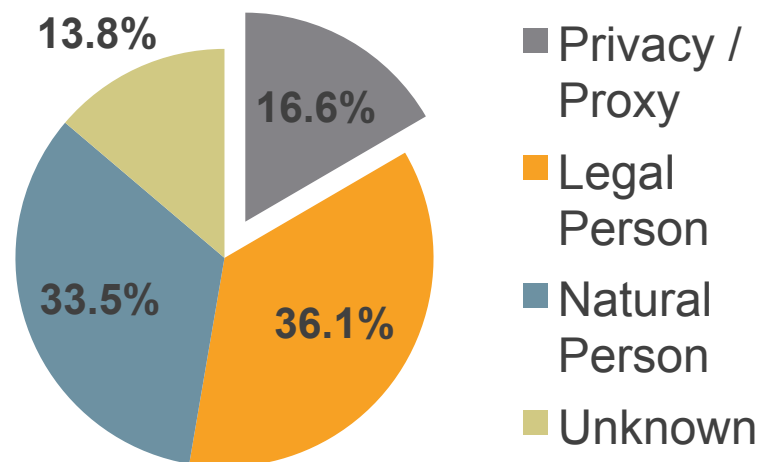

3. Potentially Commercial Activity: Compare Yes and No

Apparent Registrant Type for Domains With Potentially Commercial Activity

Apparent Registrant Type for Domains With No Potentially Commercial Activity

Difference in P/P *IS* significant (p=.002)

- NORC will complete and publish a draft report for public comment
- Community is invited to post comments on ICANN's public comment forum
- Webinars may be offered to present results and enable Q&A
- Final Report will be published after comment period closes

Thank You!
