

ISPs and Online Privacy

Yousra Hsina

Telecom Eng. Student at INSA Rennes

ICANN58, Copenhagen, March 2016

Facts

→ISPs' Visibility into Users' Online Activity.

However

ISPs are limited by technological developments:

- VPNs
- Encryption protocols
- Multiplicity of devices

Regulation

→ *Example of the US.*

But the question is

Should government privacy regulations protect consumers' internet data from (a) invasion by all internet companies or (b) only a few?

Non-ISPs intrusion in online privacy is as much as important as ISPs'.

What consumer wants

- Consistency
- Uniformity
- Simplicity
- Transparency

Thank you!
