Data Census Status

- ⦿ Key step: have to know what you have before you can decide what to share
 - An organization-internal product to enable further management of data
 - No unified tracking of data sets across the organization
 - No unified procedure for documenting what's considered public, or not
 - This is typical
- ⦿ Survey provided to all departments, asking for metadata about data sets
 - Technical description: where kept, format, size
 - Admin description: who uses it, is there PII included, is it currently public
- ⦿ Next Steps:
 - Internal working draft of the census lands any day now, but then will need revision
 - Internal procedure for vetting what to release: default to transparency, but there may be reasons to hold back (comparable to DIDP)
