

The Need to Protect Internet Values In The IoT Era

Ali Rahmanpour

*NextGen@ICANN60 Conference, Abu Dhabi
28 October - 3 November 2017*

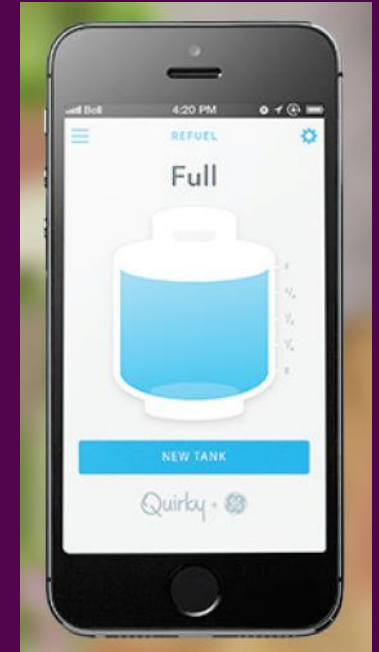

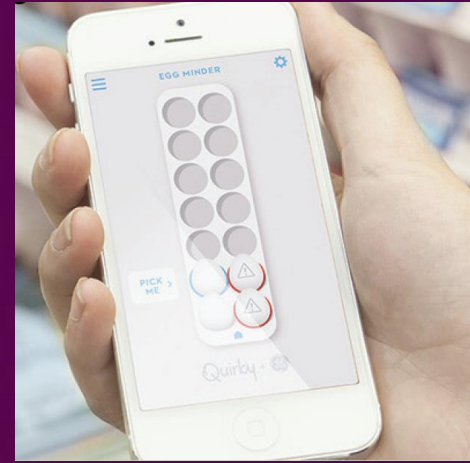

Salaam | سلام

Ali Rahmanpour

- MS in Communications Engineering (Iran University of Science and Technology)
- Co-Founder and CEO at Linkap Startup (A Platform for Development and a Market for Presentation of IoT and Smart Solutions. *More info at ["https://www.linkap.net/"](https://www.linkap.net/)*)

I'm so honored to be Here as a NextGenner :)

The Internet of Things Era

The Internet of Things Era

- The Internet has connected people to each other before. Now it's things turn to be connected!
- The Internet of Things (IoT) will change our industry and lifestyle fundamentally.
- It has huge economic effects too: \$3.9-11.1 trillion value creation till 2025.
- This time, developing countries are in the game too!

IoT Needs New Technologies

Until now, the most focus has been on this aspect of IoT.

Sensors &
Actuators

Communication
Link & Data
Aggregation

Data Processing
& Applications

IoT Is Beyond New Technologies!

- Some issues such as **Stability, Security** and **Privacy** have more important aspects than technical ones.
- This needs to work on some other areas such as Education, Regulation and **Policies**.

Open and Borderless

- Now and with the IoT, every aspect of our life (even fundamental ones) is depending on the Internet.
- So all of us should be more aware of the values and fundamentals which have shaped our great Internet, and should stand for protecting them.
